CFM PowerBI Integration

Turn your data into insights

Drive a data culture across your organisation with advanced analytics.

Data is the new gold. But to enable business executives to make insight-driven decisions that are needed to achieve a company's growth goals, data needs to be managed efficiently and analysed in a structured way. To make this possible and offer CFM users valuable insights into their operational data, we integrated Microsoft Power BI into our system. With this integration users can simply access CFM's data base to process the information in Power BI.

Next to the option to use a variety of predefined reports, users can also create their own reports using an assortment of templates or simply create new ones completely from scratch. All data is visualised in a clearly structured way, turning your data into insights, and immediately offering added value. By generating impactful statistics, KPIs and detailed reports, users of CFM can make best-informed decisions, ensuring a continued success.

Well informed

Get an instant overview on your company's KPIs and their development.

Increase efficiency

Use our powerful reports to easily find potential for improvement.

Flexible

Connect any external source of information to conduct advanced analyses.

Collaborative

User-generated reports are embedded and can be used repeatedly by any user.

Visualisation of information

An image can say more than a thousand words. And the same is true for data analytics. Thanks to straight-forward options for visualisation you can create impactful graphs to share with your colleagues within minutes. Driving a data culture across your organisation and empowering everyone in your company to make data-driven decisions.

From data to insights

All CFM modules have always included pre-defined reports to offer in-depth insights into data, with our integration of Microsoft Power BI we are going one step further: You are able to utilise any operational data from CFM to create your own powerful reports and statistics. Simply select from existing reports or create your own. You can also integrate data from other sources to create interactive, immersive statistics and reports.

Key features

➕ All data is visualised in a clearly structured way

➕ Option to use pre-defined reports or create new ones from scratch

➕ User-generated reports are embedded in CFM and can be used repeatedly

➕ Connect any external source of information to conduct advanced analyses

➕ Access CFM's data base to turn any operational data into powerful reports or statistics

About Hanseaticsoft

Hanseaticsoft was founded in 2009 by Alexander Buchmann. Buchmann and his team draw on several years of experience in the software department of a medium-sized shipping company in Hamburg, the third largest container harbour in Europe. In Hanseaticsoft, the idea of a new software concept was finally realised: giving enterprises access to new and efficient technologies by means of intuitive software solutions. Today Hanseaticsoft has more than 60 employees. It is now part of Lloyd's Register Group, one of the world's leading providers of professional services for engineering and technology – improving safety and increasing the performance of critical infrastructure for clients in over 75 countries worldwide.
